

Sprint 3 Report

Groovo

Team Groovo

11/17/2025

Actions to Stop Doing

List the activities or actions the team determined they should stop doing. Include a brief explanation for each.

- None

Actions to Start Doing

List the activities or actions the team would like to start doing to improve their development process. Include a brief explanation for each.

- Merge the git branches more often
 - Right now, branches are sitting unmerged for several days, which increases the chance of merge conflicts, outdated code, and duplicated work. When people branch off old commits, they are building features on stale foundations.
 - How we will do it: Require branches to be merged at least once every 1–2 days, Smaller, incremental PRs instead of large multi-day ones, Mandatory review process (1 reviewer minimum), Use clear PR templates (what changed, why, screenshots if UI)
- Start defining our DONE definitions for each sprint before our final presentation.
 - Tasks are currently being completed with different assumptions about “done.”
 - For each Sprint, the team will create a shared DoD that might include: Feature meets acceptance criteria, Code reviewed and merged to main, No console errors, Includes loading/error states, API contract documented, etc.
- Create a Coding Standards & Style Guide Document
 - Right now developers are writing code with slightly different styles, patterns, and file structures. This causes: inconsistent formatting, merge conflicts, difficulty understanding teammates’ code, slower onboarding of new contributors
 - How we will do it:
 - Create /docs/Coding-Standards.md at the root of the repo
 - Task - Adam

- Add rules for: file naming, folder structure, React conventions, API route patterns, MongoDB schemas

Actions to Keep Doing

List the activities or actions that are working well and should continue.

- Maintain strong team communication
 - The team has demonstrated consistent and effective communication throughout the sprint. Regular updates, responsiveness on Discord, and willingness to collaborate have contributed significantly to smooth progress.
- Preserve the current momentum and work ethic
 - The team showed excellent momentum during this sprint—tasks were actively worked on, blockers were addressed promptly, and features progressed at a consistent pace. Maintaining this energy and workflow into the next sprint will be crucial for meeting future deliverables and improving overall output quality.

Work Completed / Not Completed

User Stories Completed:

- User Stories 1-4 (Still need to merge the library for saved albums into main)
- User story 5 Tasks 1, 2, and 3

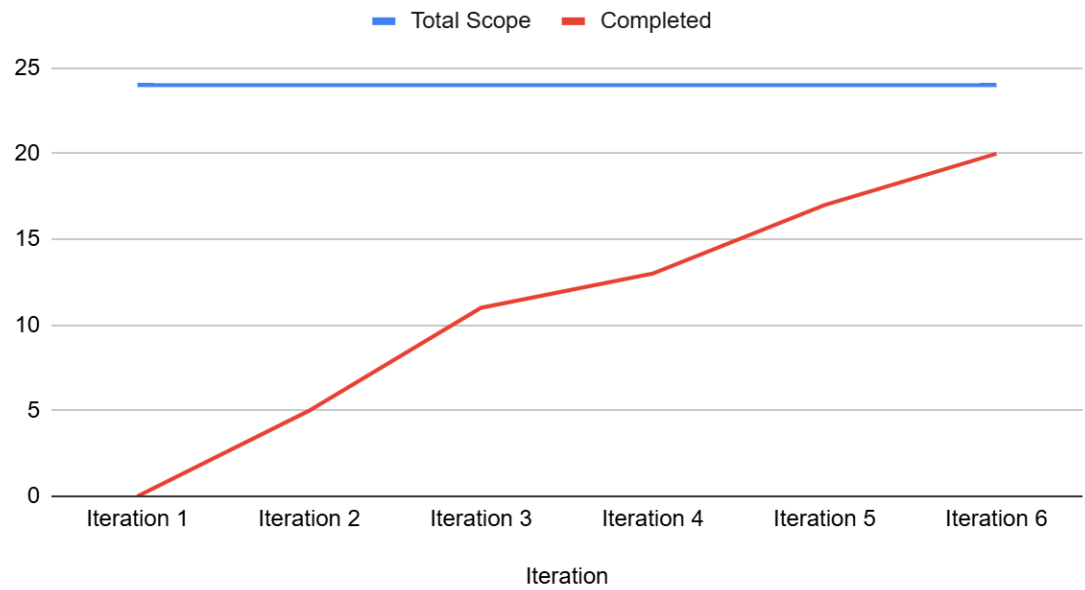

User Stories Not Completed:

- User Story 5: Task 4 - Add /review interaction for an artist

Work Completion Rate

- Report the following metrics:
 - Total number of user stories completed during the sprint: 4
 - Total number of estimated ideal work hours completed:
 - Total number of days in the sprint: 13
 - Ideal work hours per day: 3
- (For later sprints) Average user stories/day across all sprints:
- (For later sprints) Average ideal work hours/day across all sprints:

Total Scope and Completed
